## **BRISTAN**

#### **Installation Instructions** & User Guide

Please leave these instructions with the end user

Product Code: VAL2 BAS C CD (D2)

### **Specifications**

**Inlet Water Temperature** 

60-65°C Recommended

**Dynamic Water Pressure** 

Max: 5.0 bar

Maximum Static Pressure: 10.0 bar

#### **Inlet Connections**

1/2" BSP Flexible Tails

#### **Tools You'll Need**

**Prior to Installation** 

All products manufactured and supplied by Bristan are safe

maintenance in accordance with these instructions.

provided they are installed, used correctly and receive regular

Adjustable

Long-Nosed

**Pack Contents** 

## This product has been tested to the Water Regulations Advisory

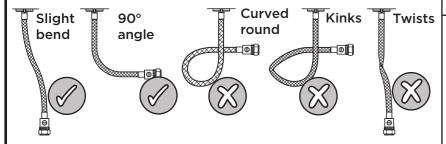

Scheme (WRAS) and satisfies the requirements of the Water Supply (Water Fittings) Regulations 1999 and current bylaws. For full Installation Requirements & Notes (IRN) please visit wras.co.uk/directory.

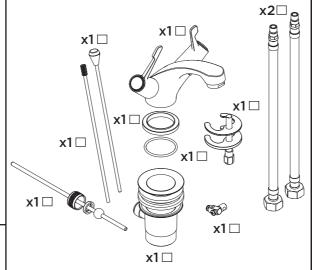

We recommend isolation valves to be fitted to the inlet water supplies to ensure ease of future maintenance.

Before installing these taps the water supply must be thoroughly flushed in order to remove any swarf, solder etc.

This product must not be modified in any way as this will invalidate the guarantee.

#### Flexible Tail Positions

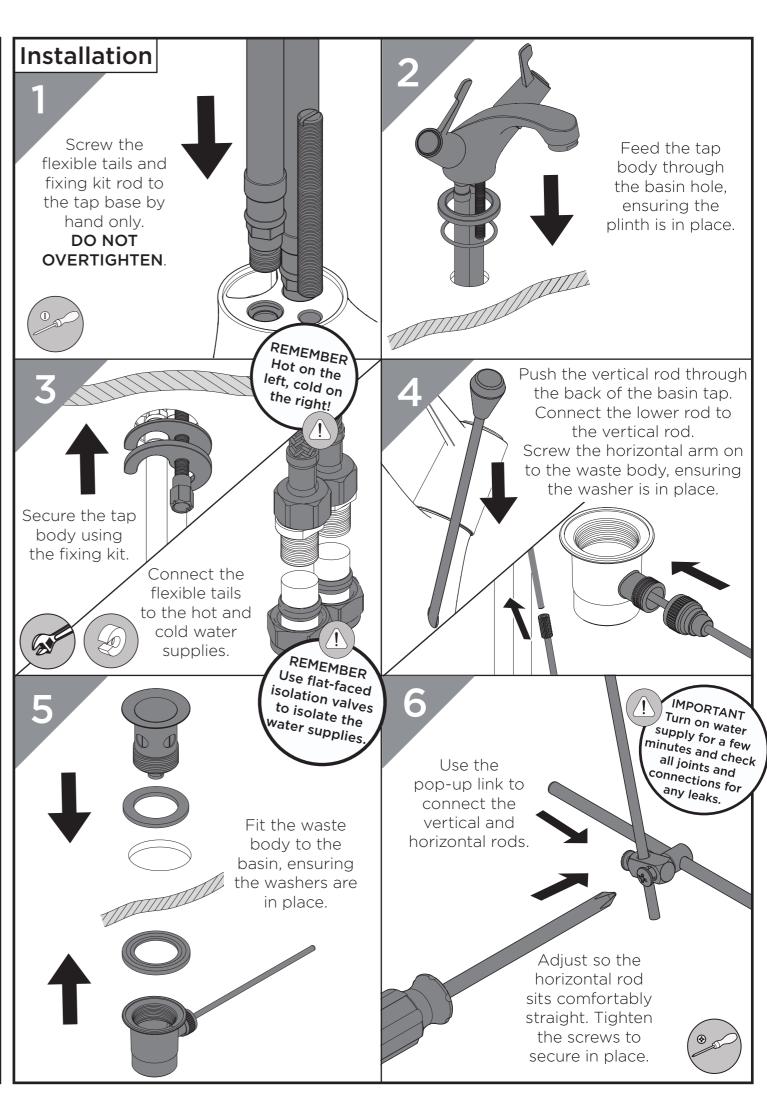

#### **Spare Parts**

To replace any spare parts for your tap, why not scan the QR Code or visit www.bristan.com and search for your product.

# Operation On Pull the rod up to seal the plug. Push it down to release.

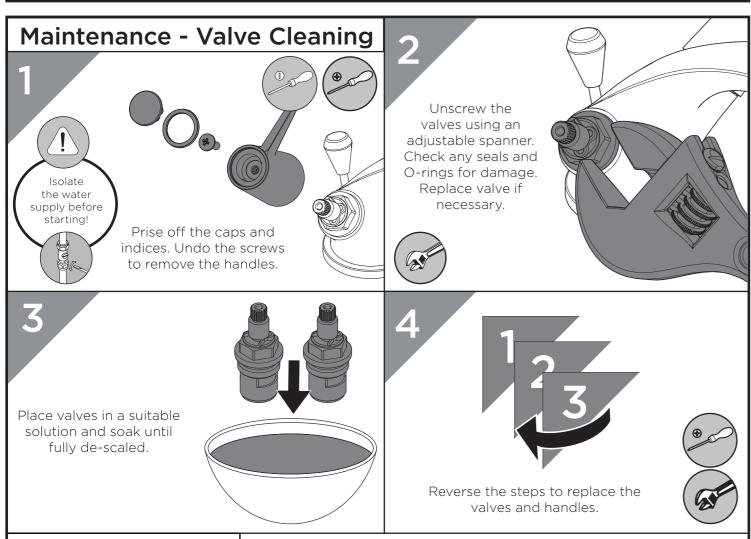

### **General Cleaning**

Bristan products are made from premium materials, with hand polishing and electroplated finishes.

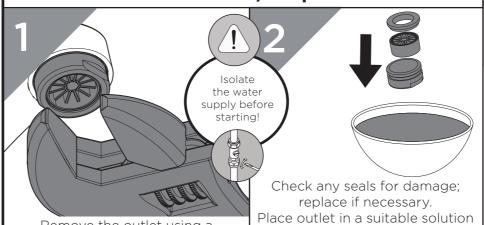

Your taps or shower should be regularly cleaned with warm water, a mild pH-neutral liquid soap, and polished with a soft cloth. Any residues from soap, toothpaste, shampoos and shower gels can cause blemishes if not rinsed off straight after use.

Household bleaches and cleaners contain harsh chemicals and may damage the surface finish. Avoid using abrasive cloths, scouring pads, scrub sponges, steel wool or anything similar.

Some surfaces such as nickel and pewter may be affected by the dye found in some cloths, so it is also important to avoid hanging cloths on spouts.

## Maintenance - Clean/Replace Outlet

Reverse the steps to replace the outlet.

## Troubleshooting

Remove the outlet using a

suitable spanner.

Symptom	Cause	Remedy
No flow or low flow rate	Partially closed isolation valve.	Open isolation valve.
	Instantaneous water heater cycles on and off as flow rate or pressure is too low.	Increase water flow rate or pressure through system.
	Head of water is below the minimum distance required.	Refer to specification for minimum distance required.
	Hot or cold water being drawn off elsewhere causing pressure changes or instantaneous boiler temperature changes.	Do not use other water outlets when using the taps.
	Airlock or partial blockage in the supply pipework.	Flush through pipework to ensure removal of debris and any airlocks.
Water dripping from taps	This is normal for a short time after using the taps.	This is caused by residual water tension, the build up of water in the tap body.
	If water continues to drip, possibly due to the ceramic disc valves	Remove valves and clean, refer to 'Maintenance' section before starting any maintenance.
Taps do not turn on	Closed isolation valve.	Open isolation valve.
	Mains water supply turned off.	Turn on mains water supply.

and soak until fully de-scaled.

#### Notes

Please use this space for any notes you or your installer may have regarding the installation/plumbing of this product.
